Brand Equity

SUBMITTED BY:  Leya Matthew
SUBJECT(S):  Marketing
GRADE LEVEL(S):  9, 10, 11, 12

OVERVIEW:
This lesson continues the lesson on brands, branding and brand strategies to now highlight the concept of brand equity. Building on earlier concepts, students analyze the various elements that constitute brand equity. According to the Wharton Global Youth Program glossary: Brand equity refers to the marketing of facts that are uniquely attributable to the brand. In particular, brand equity captures the outcomes, including how aware consumers are of the product, how much they like it, how committed they are to it, and how much they’re willing to pay for it, that result from a product’s name. From the general concept of branding (ideas, emotions attached to a distinct identity, name, logo), we now move to specific expectations from branding — name recognition, market share, sales, etc. In today’s competitive world the leverage a brand offers a product is tangible and extremely valuable for marketing departments.

Common Core Standard(s):

1. CCR Standard for Reading: Read closely to determine what the text says explicitly and make logical inferences from it.
2. CCR Standards for Listening: Prepare for and participate effectively in a range of conversations and collaborations with diverse partners, building on each other’s ideas and expressing their own clearly and persuasively. Evaluate a speaker's point of view, reasoning and use of evidence and rhetoric.
3. CCR Standards for Speaking: Present information, findings and supporting evidence in such a way that listeners can follow the line of reasoning, and the organization, development and style are appropriate to the task, purpose and audience.

Objectives/Purposes: Students will analyze the brand equity of a brand of their choice.

Knowledge@Wharton Article: “The iPhone in China: Will Apple Connect with the World’s Biggest Mobile Market?”

Other Resources/Materials:

Handout of sample survey

Internet access
Activity:

1. Introduction to concepts (10-15 mins)

The teacher begins the lesson by explaining the concept of brand equity. According to the Knowledge@WhartonHighSchool glossary: *In particular, brand equity captures the outcomes, including how aware consumers are of the product, how much they like it, how committed they are to it, and how much they’re willing to pay for it, that result from a product’s name – for example, Coca-Cola – that would not occur if the same product did not bear that name – example, a generic cola.*

To unpack this rather seemingly complicated definition I used an example — in the form of a survey created around the underlined points from the definition. The example is included as an attachment to the lesson. In the example of the Apple iphone, the four points from the definition are broken down into numerical points. A person ticking the “strongly aware” category of the survey fetches 4 points for iphone while the person ticking the “not aware” category gains a single point for apple. Similarly, a person ticking “I loooove Apple” gains 4 points for Apple while “I’m not crazy about Apple fetches 2 points for Apple. In this way, the definition is broken down into a numerical 4-point scale for each part of the definition. This can then be compared to the brand equity of a competing Smartphone like that of Blackberry, to really unpack what brand equity means to a branded product.

2. Work with Knowledge@Wharton article (10 mins)

Students are now given copies of the article: “The iPhone in China: Will Apple Connect with the World’s Biggest Mobile Market?” to further analyze the brand equity of a product along different market segments or regions. The article talks about the differing perception of Apple in the US, China and India, and how marketing decisions in different countries can impact the global brand equity of Apple.

3. Student Surveys (15 mins)

Students are now asked to design their own surveys to analyze the brand equity of a brand of their choice. Once the students design the surveys, they can ask their classmates to respond to the survey. Once they have the sufficient number of respondents, they are guided through the
math to arrive at a final percentage figure for the brand equity of the product they chose. Using the sample survey as a take off point, the numerical analysis is explained. The scores are to be multiplied with the respondent tally and a final percentage value is arrived at for a comparable analysis.

Students can then be asked to present their analysis from the survey in the next lesson. It will be interesting if some students choose competing products or services for surveys. For example, if Apple’s brand equity turns out to be 73% and Blackberry’s is 68%, it can be analyzed whether — customers are more aware, or they like the product more, or it is a commitment, or it is the willingness to pay that gives Apple higher brand equity. Apple’s branding strategy can be analyzed along with Blackberry’s to understand how brand equity is created in tangible terms.

**Tying It All Together:** Brand Equity sounds like a difficult concept since the name does not immediately conjure up a coherent meaning. Furthermore, equity may also refer to equality, which can be confusing. Students therefore build up the various blocks that together constitute brand equity, through the survey exercise.

**Practice Outside of the Classroom:** The survey can also be conducted outside the class in a more rigorous fashion, making sure that a representative sample is surveyed.

**What Worked and What I Would Do Differently:** The concept of brand equity can be explored at multiple levels. This lesson can therefore be extended into a multi-tier lesson looking at the same concept from a local, regional/national and global perspective. For example, a teacher in Maharashtra (India) could do a lesson exploring the brand equity of Maharashtra and the political/economic dimensions of this phenomenon. This lesson can, among others, be linked to lessons in Social Studies/History, and Civics/Citizenship/Human rights (when a brand/nation becomes aggressive and delegitimizes other notions of identity).
